A fee of **\$462** is required for each monitoring site. One monitoring site consists of three wells installed in a triangular pattern of approximately 80 feet by 30 feet. Monitoring is required at the rate of one site per three acres or one site per lot if lots are larger than three acres.

The wells should be installed in accordance with the attached diagram to assure that the recorded water table levels are indicative of the naturally occurring ground water table. While monitoring wells can be installed at any time, determination of the dates of the season of maximum ground water table in any given year can only be made after review of the water table levels recorded.
